# Make your own Rotocopter

To make your rotocopter, you will need a template and one paper clip.

Start by folding the X panel back along the dotted line.

Then, fold the Y panel back along the dotted line. Press down on the creases.

Fold the Z panel up along the dotted line and press down.

Next, fold Wing A down along the dotted line and press down.
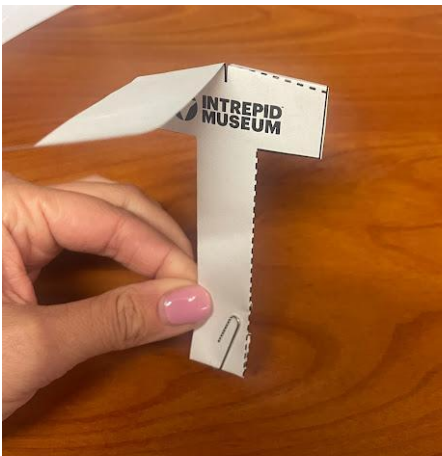

Then, fold Wing B back in the opposite direction and press down.

Lift the two wings up so that they stick out.

Finally, put a paper clip on the bottom of your rotocopter, on top of Z.

Your rotocopter is ready to fly. Drop it and see what happens!
